

GAME RULES

- 1 Choose a challenge and count how many times each sea animal is shown.
- 2 Arrange the 4 coral pieces on the game board so that all sea animals are covered, except the ones pictured in your challenge.
- 3 There is only 1 solution per challenge. Solutions to all 48 challenges can be found at the back of the booklets.

HINTS:

- The position of each animal in the challenge is not connected to its position on the game board. So when a certain animal is pictured at the top of a challenge, you might need to reveal that animal at the bottom of your game board.
- When you place all 4 playing pieces on the game board, the cut-outs always leave 7 openings that show either sea animals or empty spaces. If the challenge tells you to show 4 animals, don't forget to leave 3 empty spaces uncovered.
- Sometimes it is easier to focus on the empty spaces rather than on the animals you need to show!
